

Widgets are tools and functions in SMART Maps that allow you to perform certain tasks.

Home and Zooming Widgets

- 1| When the application starts, the Home Button widget is automatically enabled. Clicking it resets the map extent to the initial map extent.

- 2| Zooming In/Out. You have 3 options:
 - a. Click the plus or minus button to zoom in or out on the map,

- b. you can use your mouse wheel to zoom (i. Zoom In or ii. Zoom Out),

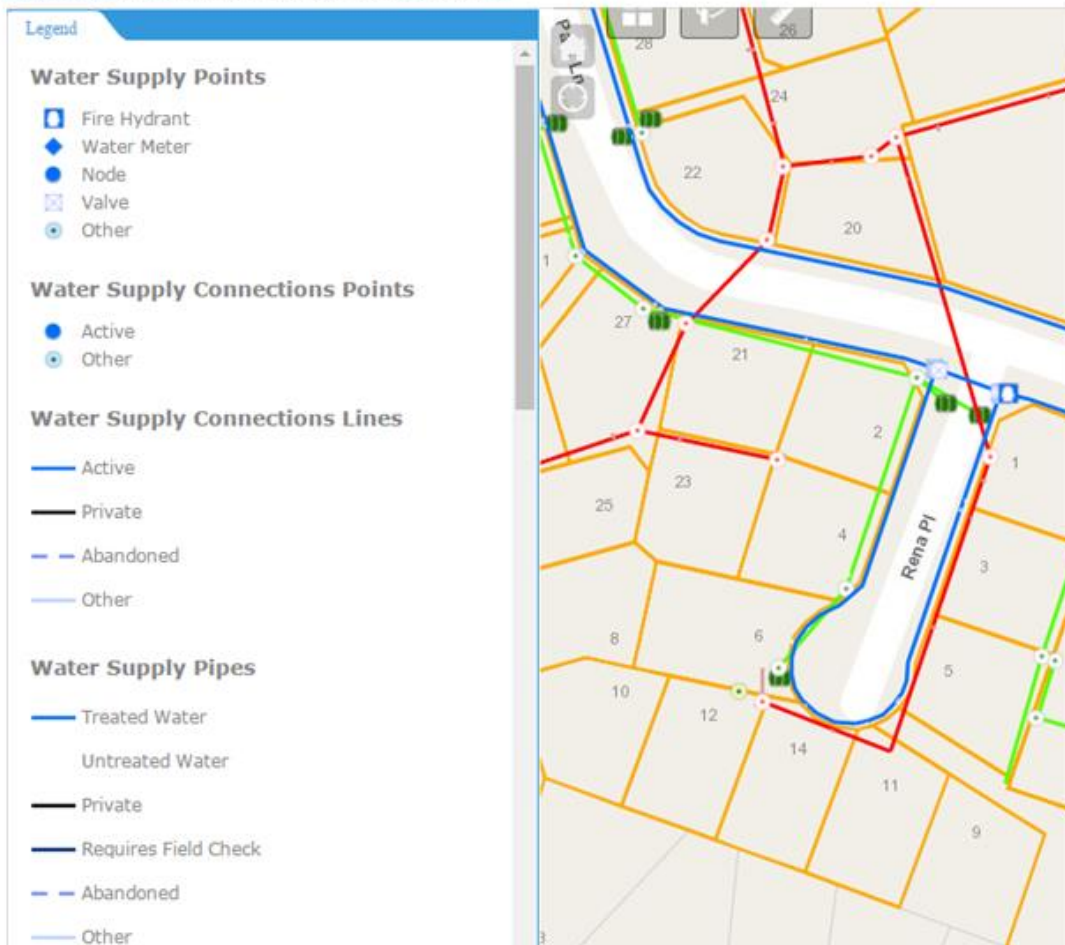

- c. or you can use mouse and keyboard combination (i. Zoom In or ii. Zoom Out).

Legend Widget

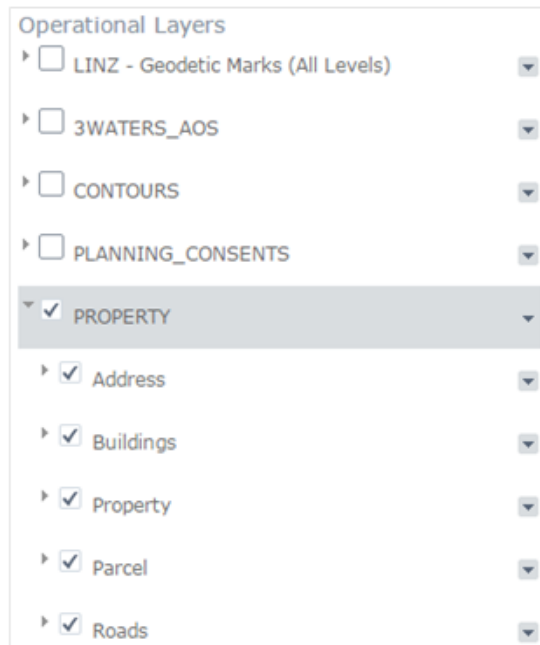

- 3 | When the application starts, the Legend widget  is automatically enabled. Clicking the Legend widget displays the legend window.

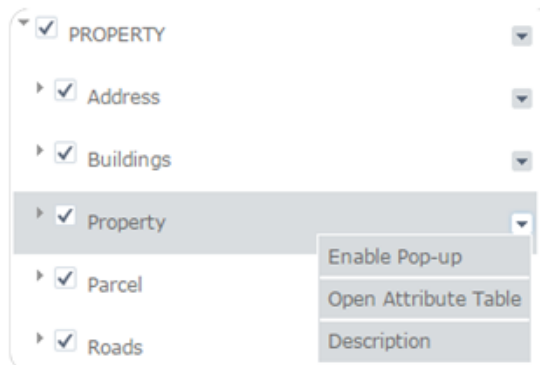

Layer Widget

4) Obtaining information from the required dataset in the map you can enable html pops to appear when you click on them.

- a. Go to the Layer List (table or contents) widget , select the widget to display the datasets for the map

- b. Select the Dataset and click on the down arrow and select enable Pop-up

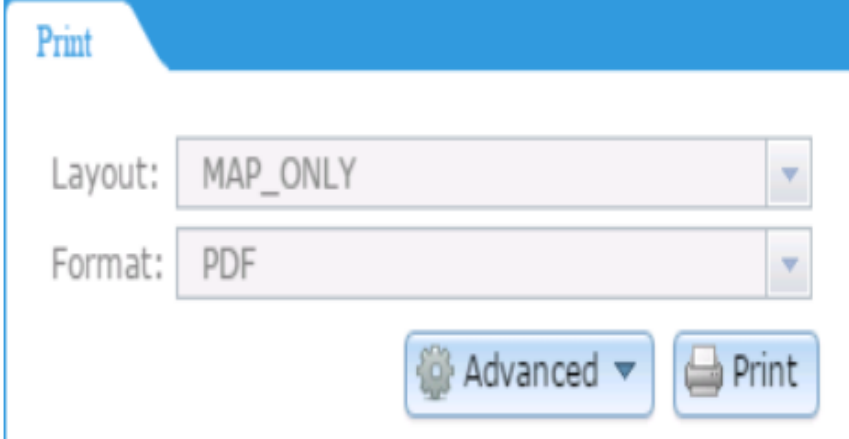

- c. **Note:** Please note these Pop-ups will not have been configured with suitable attribute header names.

Print Widget

5| The Print Widget allows you to print your map to a number of formats

- a. Select the Print widget  this will open the Print Panel

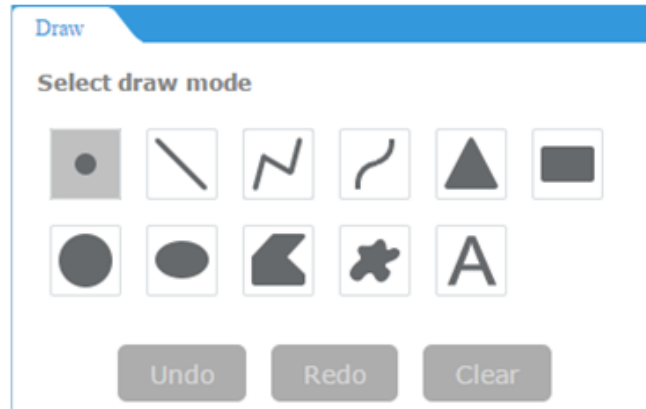

The screenshot shows a 'Print' panel with a blue header. Below the header, there are two dropdown menus: 'Layout:' with 'MAP_ONLY' selected and 'Format:' with 'PDF' selected. At the bottom right, there are two buttons: 'Advanced' with a gear icon and a dropdown arrow, and 'Print' with a printer icon.

Draw Widget

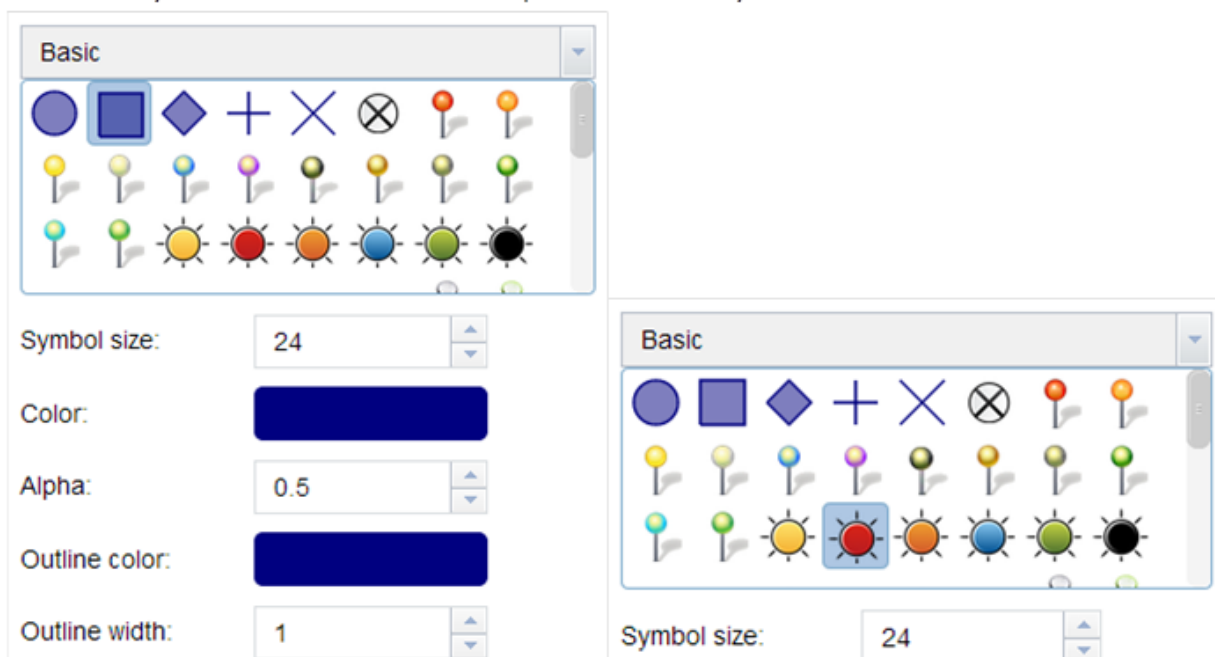

1| The Draw widget allows you to create graphics that display on the map. It optionally adds line distance or polygon area to the feature as text.

a. To open the Draw widget select the draw icon , this will open the draw panel.

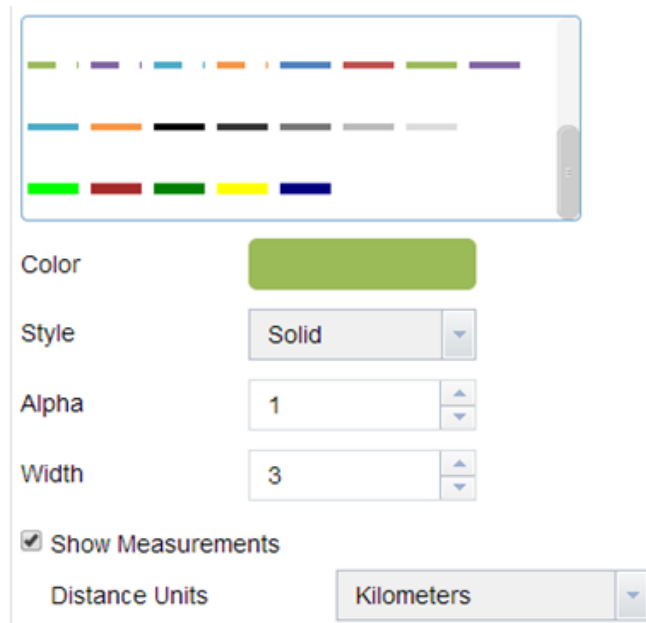

b. Select the desired drawing mode by clicking the symbol type.

i. For point symbols, select the marker category (different symbols are available in each category), size, colour, transparency, outline colour, and outline width of the symbol. Only the size is available for the picture marker symbols.

- i. For line symbols, select a pre-defined symbol from the box. You may also customize the colour, style, transparency, and width of the symbol. Click **Show Measurements** and select the **Distance Units** to display the measurement with the line.

The interface for line symbols includes a selection box with various colored and styled line segments. Below the selection box are controls for: Color (a green color swatch), Style (a dropdown menu set to 'Solid'), Alpha (a numeric input field set to '1'), Width (a numeric input field set to '3'), a checked checkbox for 'Show Measurements', and Distance Units (a dropdown menu set to 'Kilometers').

- ii. For polygon symbols, select a pre-defined symbol from the box. You may also customize the fill colour, transparency, outline colour, and outline width of the symbol. Click Show Measurements and select the Area Units and Distance Units to display the measurement with the polygon.

The interface for polygon symbols includes a selection box with various colored and outlined polygon shapes. Below the selection box are controls for: Color (a green color swatch), Alpha (a numeric input field set to '0.5'), Outline color (a dark green color swatch), Outline width (a numeric input field set to '2'), a checked checkbox for 'Show Measurements', Area Units (a dropdown menu set to 'Square kilometers'), and Distance Units (a dropdown menu set to 'Kilometers').

- i. For text symbols, enter the Text to be drawn, and select a font colour and size for the symbol.

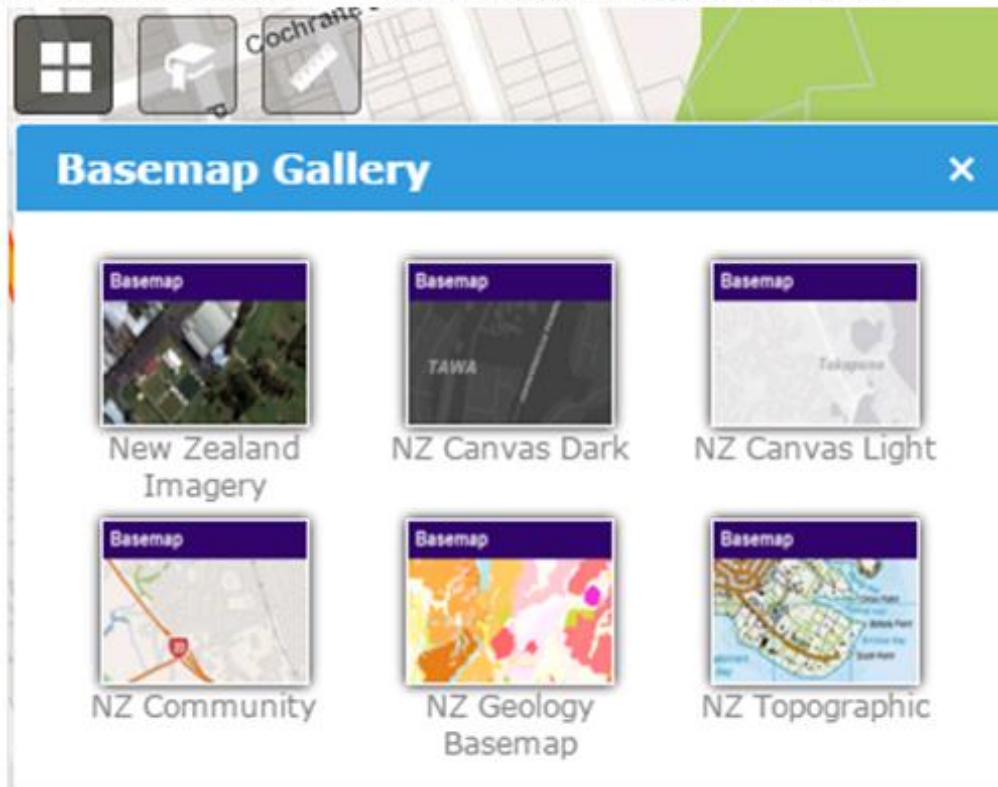

The interface for text symbols includes a text input field, a font color swatch (black), and a font size input field set to '20'.
